

## **GlasRoc<sup>®</sup> Sheathing: Application to steel studs with pneumatic pin systems**

Pneumatic pin systems are another option for attaching GlasRoc<sup>®</sup> Sheathing to steel studs. In 2005, we tested several systems to aid the design professional who chooses to use one of these systems. The following chart represents the negative design pressures as reported by RADCO, an independent lab, in their Test Reports No. RAD-3787, RAD-3766, and RAD-3788. In all cases a safety factor of 3.0 has been applied to the design pressures.

The pneumatic pin fastener companies should be contacted by the design professional for installation details of their systems.
