5/8" T4MAG DUAL SUBSTRATE PIN

TACKLE BOTH CONCRETE & STEEL

WWW.RAMSET.COM

WHY CHOOSE THE T4058SM?

Built for Productivity and Simplicity

Ramset® T4058SM Dual Substrate Pins are engineered to boost productivity on the jobsite. Designed to fasten interior track into both concrete and steel, this innovative 5/8" pin means you no longer have to alternate between 3/4" and 1/2" pins for different substrates.

Key Features

- **Dual Substrate Performance** - Use in both concrete and steel, eliminating the need for multiple pin sizes.
- **Time-Saving Efficiency** - Cuts downtime by avoiding pin changes — get more done, faster.
- **Simplified Jobsite Management** - Minimize the number of SKUs you need to track and carry.
- **Made in the USA** - BABA compliant.

T4MAG FUEL/PIN PACKS - 1000 PINS AND 2 FUEL CELLS PER BOX

Larger .125 shank diameter offers improved success rate (15 pin strip)

PART NUMBER	PIN LENGTH		DESCRIPTION
	IN.	(MM)	
T4012M	1/2	(12.7)	1/2" steel pin with T4 fuel cell
T4012SM	1/2	(12.7)	1/2" premium steel pin with T4 fuel cell
T4058SM	5/8	(16)	5/8" premium concrete and steel pin with T4 fuel cell
T4034BM	3/4	(19.1)	3/4" concrete pin with T4 fuel cell
T4034SM*	3/4	(19.1)	3/4" step shank pin with T4 fuel cell
T4100M	1	(25.4)	1" concrete pin with T4 fuel cell

Shank diameter = .125 *Shank diameter = .104 / .125 Head diameter = .250

Compatible with T4MAG gas tools. Sold in master cartons of 5000 minimum. Cartons cannot be split.

LONG LIFE COATING ALLOWS FOR USE IN:

- Exterior applications
- Treated Lumber
- Treated Plywood
- Fire Resistant Plywood
- 20g to 14g applications

Ramset fasteners may be specified by their type or catalog number to satisfy fastening requirements.

PIN SPECIFICATIONS

- Made from AISI 1060-1065 steel. Austempered to a core hardness of 52-56 Rc
- Typical tensile strength: 270,000 psi
- Typical shear strength: 162,000 psi
- STANDARD FINISHES**
Proprietary black
- Mechanical zinc plate to a minimum thickness of .0002 meets requirements of ASTM B695—Class 5 Type I

1.0 EVALUATION SCOPE

Compliance with the following codes:

- 2024, 2021, 2018 and 2015 [International Building Code® \(IBC\)](#)
- 2024, 2021, 2018 and 2015 [International Residential Code® \(IRC\)](#)

Section number references in this report are for the 2024 IBC and IRC and the standards referenced therein. Corresponding section numbers for earlier code editions are shown in [Table 8](#) at the end of this report.

Property evaluated:

- Structural

2.0 USES

Ramset T3/T4 power-driven fasteners are power-actuated fasteners (PAFs) used to fasten building components such as light-gage cold-formed steel framing to normalweight concrete, sand-lightweight concrete, sand-lightweight concrete filled steel deck panels, concrete masonry units (CMUs) and structural steel substrate materials. The fasteners are used as alternatives to the cast-in-place concrete anchors described in IBC Section 1901.3 for placement in concrete; the embedded anchors described Section 8.1.4 of TMS 402, referenced in IBC Section 2107 for placement in masonry; and to the welds and bolts used to attach to steel, described in IBC Sections 2201.4. For structures regulated under the IRC, the fasteners may also be used where an engineered design is submitted in accordance with IRC Section R301.1.3.

The PAFs are intended for use in redundant applications, which are defined as applications where multiple PAFs support elements that are capable of redistributing the load to neighboring PAFs, in the event of a PAF failure. Examples include, but are not limited to, PAFs used to fasten cold-formed steel track, where the track can redistribute loads and PAF assemblies where the supported elements, such as conduit and ceiling framing can redistribute the loads to neighboring PAF assemblies.

3.0 DESCRIPTION

3.1 Ramset T3/T4 Power Driven Fasteners:

Ramset T3/T4 power-driven fasteners are manufactured from steel complying with ASTM A510, Grade 1060, and austempered to a Rockwell “C” 52 to 58 core hardness. See [Table 1](#) for shank descriptions, fastener dimensions, coating information and applicable base materials. See [Figure 1](#) for fastener image examples.

3.2 Substrate Materials:

3.2.1 Concrete: Normalweight and lightweight concrete must comply with IBC Chapter 19 or IRC Section R402.2, as applicable. The minimum concrete compressive strength at the time of fastener installation must be as noted in the applicable allowable load table.

3.2.2 Steel Deck Panels: Steel deck panels must conform to a code-referenced material standard, with the minimum thickness, minimum yield strength and specified tensile strength noted in [Table 5](#). See [Figures 2](#) and [3](#) for panel configuration requirements.

3.2.3 Concrete Masonry: CMUs must be minimum 8-inch-thick blocks, lightweight blocks conforming to ASTM C90. Mortar must be Type N or Type S in accordance with ASTM C270.

3.2.4 Structural Steel: Structural steel used in supports must comply with the minimum strength requirements of ASTM A36, ASTM A572 Grade 50 or ASTM A992, and must have thicknesses as noted in [Tables 6](#) and [7](#), as applicable.

4.0 DESIGN AND INSTALLATION

4.1 Design:

4.1.1 General: Design of the connection of the attached material to the base material must take into account the properties of the attached material and the need for redundancy, and must comply with the applicable requirements of the IBC.

Selection of fasteners must take into consideration the applicable base material and the length of the fastener. The minimum fastener length must be determined as follows:

- Unless otherwise noted, for installation into concrete, concrete-filled steel deck panels, concrete masonry and steel base materials, the minimum effective shank length shown in [Table 1](#) must equal or exceed the sum of the thickness of the attached material and the minimum embedment depth (penetration) shown in the applicable tables in this report.
- For installation through steel base materials, the minimum effective shank length shown in [Table 1](#) must equal or exceed the sum of the following: the thickness of the attached material, the thickness of the base material and the required point penetration shown in the applicable tables in this report.

4.1.2 Allowable Loads: The applicable allowable shear and tension load tables for the fasteners driven into different base materials may be determined by referencing [Table 1](#).

The most critical applied loads, excluding seismic load effects, resulting from the load combinations in Section 2.4 of ASCE 7 (referenced in IBC Section 1605.1) or IBC Section 1605.2 must not exceed the allowable loads described in this section. For fasteners which are subjected to seismic loads, see Section 4.1.5 for additional information.

The allowable shear and tension (pullout) values in the tables of this report are for use in allowable stress design (ASD). The allowable loads apply to the interaction between the fasteners and the specified base materials only, and limit states such as pull-over and lateral bearing, which are governed by the properties of attached materials, are outside the scope of this report. Design of the connection to the attached material must comply with the applicable requirements of the IBC. The stress increases and load reductions described in IBC Section 1605.2 are not allowed.

4.1.3 Combined Loading: For fasteners subjected to both shear and tension loads, compliance with the following interaction equation must be verified:

$$(p/P_a) + (v/V_a) \leq 1$$

where:

- p = Actual applied tension load on fastener, lbf(N)
- P_a = Allowable tension load for the fastener, lbf (N)
- v = Actual applied shear load on fastener, lbf (N)
- V_a = Allowable shear load for the fastener, lbf (N)

4.1.4 Steel-to-steel Connections: When the fasteners listed in [Tables 6](#) and [7](#) are used in connections of two steel elements in accordance with Section J5 of AISI S100, connection capacity must be determined in accordance with Sections 4.1.4.1 and 4.1.4.2, as applicable.

4.1.4.1 Connection Strength - Tension: To determine tensile connection strength in accordance with Section J5.2 of AISI S100, the fastener tension strength, pull-out strength and pull-over strength must be known. These characteristics must be determined as follows:

- **PAF Tensile Strength:** The allowable fastener tension strengths must be calculated in accordance with Section J5.2.1 of AISI S100 using a value of 260,000 psi for F_{uh} .
- **Pull-out Strength:** See [Tables 6](#) or [7](#), as applicable, for available pull-out strength.
- **Pull-over Strength:** The available pull-over strengths must be calculated in accordance with Section J5.2.3 of AISI S100.

4.1.4.2 Connection Strength - Shear: To determine shear connection strength in accordance with Section J5.3 of AISI S100, the fastener shear strength, bearing and tilting strength, pull-out strength in shear, net section rupture strength and shear strength limited by edge distance must be known. These characteristics must be determined as follows:

- **PAF Shear Strength:** The allowable fastener shear strengths must be calculated in accordance with Section J5.3.1 of AISI S100 using a value of 260,000 psi for F_{uh} .
- **Bearing and Tilting Strength:** The available bearing and tilting strengths must be calculated in accordance with Section J5.3.2 of AISI S100.
- **Pull-out Strength in Shear:** The available pull-out strength in shear must be the applicable allowable shear strength from [Table 6](#) or [7](#), as applicable, or must be calculated in accordance with Section J5.3.3 of AISI S100.
- **Net Section Rupture Strength and Shear Strength Limited by Edge Distance:** The net section rupture strength must be determined in accordance with Section J5.3.4 of AISI S100 and the shear strength limited by edge distance must be determined in accordance with Section J5.3.5 of AISI S100.

4.1.5 Seismic Considerations: The fasteners may be used when subjected to seismic loads as follows:

1. The fasteners may be used for attachment of nonstructural components listed in Table 13.1-1 of ASCE 7, which are exempt from the requirements of ASCE 7.
2. Concrete Base Materials: The fasteners installed in concrete base materials may be used to support acoustical tile or lay-in panel suspended ceiling systems, distributed systems and distribution systems where the service load on any individual fastener does not exceed the lesser of 90 lbf (400 N) or the published allowable load shown in [Tables 2](#), [3](#) and [5](#), as applicable.
3. Steel Base Materials: The fasteners installed in steel may be used for attaching nonstructural components where the service load on any individual fastener does not exceed the lesser of 250 lbf (1112 N) or the published allowable load shown in [Tables 6](#) and [7](#), as applicable.
4. Interior, Nonstructural Walls: For interior, nonstructural walls that are not subject to sustained tension loads and are not a bracing application, the power-driven fasteners described in Section 3.0 may be used to attach steel track to concrete or steel in all Seismic Design Categories. In Seismic Design Categories D, E and F, the allowable shear load due to transverse pressure must be no more than 90 pounds (400 N) when attaching to concrete; or 250 pounds (1,112 N) when attaching to steel. Substantiating calculations are submitted addressing the fastener-to-base-material capacity and the fastener-to-attached-material capacity. Interior nonstructural walls are limited to locations where bearing walls, shear walls or braced walls are not required by the approved plans. The design load on the fastener must not exceed the allowable load shown in [Tables 2](#), [3](#), [5](#), [6](#) and [7](#), as applicable.

4.2 Installation:

4.2.1 General: The fasteners must be installed in accordance with this report and the ITW Ramset published installation instructions. A copy of these instructions must be available on the jobsite at all times during installation.

The fasteners are installed with a power fastening tool in accordance with ITW Ramset recommendations. The fastener penetration, spacing and edge distances must be as noted in the tables of this report. For fasteners installed into concrete, the fasteners must not be driven until the concrete has reached the designated compressive strength.

5.0 CONDITIONS OF USE:

The ITW Ramset T3/T4 power driven fasteners described in this report comply with, or are suitable alternatives to what is specified in, those codes listed in section 1.0 of this report, subject to the following conditions:

- 5.1 The fasteners must be manufactured and identified in accordance with this report.
- 5.2 Fastener installation must comply with this report and ITW Ramset published installation instructions. In the event of a conflict between this report and the ITW Ramset published installation instructions, this report governs.
- 5.3 Calculations demonstrating that the applied loads are less than the allowable loads described in this report must be submitted to the code official. The calculations must be prepared by a registered design professional where required by the statutes of the jurisdiction in which the project is to be constructed.
- 5.4 Refer to Section 4.1.5 for seismic considerations.
- 5.5 The minimum concrete thickness must be three times the fastener embedment, except where noted otherwise in this report.
- 5.6 The use of fasteners is limited to uncracked concrete or masonry. Cracking occurs when $f_t > f_r$ due to service loads or deformations.
- 5.7 Installation must be limited to dry interior environments, which include exterior walls which are protected by an exterior wall envelope.
- 5.8 The use of fasteners in contact with preservative-treated or fire-retardant-treated wood is outside the scope of this report.
- 5.9 The fasteners are manufactured under a quality control program with inspections by ICC-ES.

6.0 EVIDENCE SUBMITTED

Data in accordance with the [ICC-ES Acceptance Criteria for Power-actuated Fasteners Driven into Concrete, Steel, and Masonry Elements AC708 \(24\)](#), dated April 2025.

7.0 IDENTIFICATION

- 7.1 The ICC-ES mark of conformity, electronic labeling, or the evaluation report number (ICC-ES ESR-1955) along with the name, registered trademark, or registered logo of the report holder must be included in the product label.
- 7.2 In addition, the containers of the ITW Ramset T3/T4 power driven fasteners must be labeled with the manufacturer's name (ITW Ramset); the product name, length catalog number, and quantity; and the manufacturing date. In addition, all the fasteners must be identified by the letter "R" stamped into the fastener head.
- 7.3 The report holder contact information is the following:

TABLE 1—RAMSET T3/T4 FASTENERS

FASTENER ¹	SHANK TYPE	SHANK DIAMETER (inch)	HEAD DIAMETER (inch)	MAXIMUM POINT LENGTH (inch)	MINIMUM EFFECTIVE SHANK LENGTH (inch)	FASTENER COATING	APPLICABLE BASE MATERIAL	APPLICABLE LOAD TABLES
T3### T4###	Smooth, straight	0.125	0.253	0.230	Designated shank length	Black oxide, Zinc	Concrete	2 , 3 , 5
							Masonry	4
							Steel	6 , 7
T3034S T4034S	Smooth, stepped	0.104/0.125	0.253	n/a	0.725	Zinc	Concrete	2 , 3 , 5
T4058S	Tapered shank	0.129	0.250	0.353	0.682	Zinc	Concrete	2
							Steel	6 , 7

For **SI**: 1 inch = 25.4 mm.

¹### denotes numbers used in fastener designation.

TABLE 2—ALLOWABLE TENSION AND SHEAR VALUES FOR T3/T4 FASTENERS
INSTALLED IN NORMAL-WEIGHT CONCRETE (lbf)

SHANK TYPE	NOMINAL SHANK DIAMETER (inch)	MINIMUM EDGE DISTANCE (inches)	MINIMUM SPACING (inches)	MINIMUM EMBEDMENT DEPTH (inch)	ALLOWABLE LOADS (lbf)					
Concrete Compressive Strength:					2,500 psi		4,000 psi		6,000 psi	
Load Direction:					Tension	Shear	Tension	Shear	Tension	Shear
Straight	0.125	3.2	4.0	$\frac{5}{8}$ $\frac{3}{4}$	83 107	109 156	78 104	80 195	95 —	128 —
Stepped	0.104/0.125	3.0	4.0	$\frac{5}{8}$	—	—	102	138	101	119
Tapered	0.129	3.5	4.0	$\frac{5}{8}$	—	—	105	140	110	145

For **SI**: 1 inch = 25.4 mm, 1 psi = 6.89 kPa, 1 lbf = 4.45 N.

¹The fasteners must not be driven until the concrete has reached the designated minimum compressive strength. Minimum concrete thickness is three times the fastener embedment into the concrete.

TABLE 3—ALLOWABLE TENSION AND SHEAR VALUES FOR T3/T4 FASTENERS
INSTALLED IN MINIMUM 3,000 psi SAND-LIGHTWEIGHT CONCRETE (lbf)

SHANK TYPE	NOMINAL SHANK DIAMETER (inch)	MINIMUM SPACING (inches)	MINIMUM EDGE DISTANCE (inches)	MINIMUM EMBEDMENT DEPTH (inch)	ALLOWABLE LOADS (lbf)	
					Tension	Shear
Straight	0.125	4.0	3.2	$\frac{5}{8}$ $\frac{3}{4}$	84 108	108 173
Stepped	0.104/0.125	4.0	3.0	$\frac{5}{8}$	109	181

For **SI**: 1 inch = 25.4 mm, 1 psi = 6.89 kPa, 1 lbf = 4.45 N.

¹The fasteners must not be driven until the concrete has reached the designated minimum compressive strength. Minimum concrete thickness is three times the fastener embedment into the concrete, unless noted otherwise.

**TABLE 4—ALLOWABLE TENSION AND SHEAR VALUES FOR T3/T4 FASTENERS
INSTALLED IN HOLLOW CONCRETE MASONRY UNITS (CMUs)^{1,2} (lbf)**

SHANK TYPE	NOMINAL SHANK DIAMETER (inch)	MINIMUM EDGE DISTANCE (inches)	MINIMUM SPACING (inches)	MINIMUM EMBEDMENT DEPTH (inch)	ALLOWABLE LOADS (lbf)					
Fastener Location:					Face Shell ¹		Horizontal Mortar Joint (Bed Joint) ²			
Load Direction:					Tension	Shear	Tension		Shear ³	
							Type N ⁴	Type S ⁵	Type N ⁴	Type S ⁵
Straight	0.125	2	4	5/8	133	—	14	21	22	33

For SI: 1 inch = 25.4 mm, 1 lbf = 4.45 N.

¹Fasteners must be located a minimum of 2 inches from the mortar joints, center web and end web of the CMU.

²Fasteners must not be installed in the head joints. Fasteners installed in the bed joint must be installed a minimum of 8 inches from the end of the wall. Multiple fasteners in a bed joint must be spaced a minimum of 8 inches.

³Value applies to loads both parallel and perpendicular to the bed joint.

⁴Value applies to fasteners installed into Type N mortar.

⁵Value applies to fasteners installed into Type S mortar.

**TABLE 5—ALLOWABLE TENSION AND SHEAR VALUES FOR FASTENERS INSTALLED THROUGH METAL DECK INTO MINIMUM
3000 psi SAND-LIGHTWEIGHT CONCRETE¹**

SHANK TYPE	NOMINAL SHANK DIAMETER (inch)	MINIMUM SPACING (inches)	MINIMUM EMBEDMENT DEPTH (inch)	ALLOWABLE LOADS (lbf)							
Deck Type:				3-inch deep "W3" type steel deck ²				1 1/2-inch deep "B" type steel deck ³			
Fastener Location:				Upper flute		Lower flute		Upper flute		Lower flute	
Load Direction:				Tension	Shear	Tension	Shear	Tension	Shear	Tension	Shear
Straight	0.125	4.0	5/8	—	—	72	242	—	—	—	—
			3/4	—	—	93	288	—	—	—	—
Stepped	0.104/0.125	4.0	5/8	103	221	95	219	101	215	107	224

For SI: 1 inch = 25.4 mm, 1 psi = 6.89 kPa, 1 lbf = 4.45 N.

¹The fasteners must not be driven until the concrete has reached the designated minimum compressive strength. Minimum concrete thickness is three times the fastener embedment into the concrete.

²The steel deck must have a minimum base-metal thickness of 0.035 inch, a minimum yield strength of 38 ksi, and a minimum tensile strength of 52 ksi. Fasteners installed through the lower flutes of the deck must have a minimum edge distance of 1 1/8 inches from the edge of the steel deck and 3 inches from the end of the deck. Concrete thickness above the deck must be a minimum of 3 1/2 inches. See [Figure 3](#) of this report.

³The steel deck must have a minimum base-metal thickness of 0.035 inch, a minimum yield strength of 38 ksi, and a minimum tensile strength of 52 ksi. Fasteners installed through the lower flutes of the deck must have a minimum edge distance of 7/8 inches from the edge of the steel deck and 3 inches from the end of the deck. Concrete thickness above the deck must be a minimum of 2 1/4 inches. See [Figure 2](#) of this report.

**TABLE 6—ALLOWABLE TENSION AND SHEAR VALUES FOR T3/T4 FASTENERS
INSTALLED IN ASTM A36 STEEL¹ (lbf)**

NOMINAL SHANK DIAMETER (inch)	MINIMUM EDGE DISTANCE (inch)	MINIMUM SPACING (inch)	STEEL THICKNESS (inch)					
			3/16		1/4		3/8	
			Tension	Shear	Tension	Shear	Tension	Shear
0.125	0.5	1.0	63 ²	162	239 ²	211	113 ³	197 ³
0.129	0.5	1.0	202 ²	387	319 ⁴	428 ⁴	259 ⁵	263 ⁵

For SI: 1 inch = 25.4 mm, 1 lbf = 4.45 N.

¹The allowable tension and shear values are for fastenings that have the point end of the fastener fully driven through the steel base material, unless otherwise noted.

²For steel-to-steel connections designed in accordance with Section 4.1.4, the tabulated allowable load may be increased by a factor of 1.25, and the design strength may be taken as the tabulated allowable load multiplied by a factor of 2.0.

³Fastener penetration must be a minimum of 0.29 inch.

⁴Fastener penetration must be a minimum of 0.46 inch.

⁵Fastener penetration must be a minimum of 0.36 inch.

**TABLE 7—ALLOWABLE TENSION AND SHEAR VALUES FOR T3/T4 FASTENERS
INSTALLED IN ASTM A572 GRADE 50 OR ASTM A992 STEEL¹ (lbf)**

NOMINAL SHANK DIAMETER (inch)	MINIMUM EDGE DISTANCE (inch)	MINIMUM SPACING (inch)	STEEL THICKNESS (inch)					
			³ / ₁₆		¹ / ₄		³ / ₈	
			Tension	Shear	Tension	Shear	Tension	Shear
0.125	0.5	1.0	103 ²	222	147 ²	119	147 ³	112 ³
0.129	0.5	1.0	221 ⁴	348 ⁴	350 ⁵	419 ⁵	264 ⁶	301 ⁶

For SI: 1 inch = 25.4 mm, 1 lbf = 4.45 N.

¹The allowable tension and shear values are for fastenings that have the pointed end of the fastener fully driven through the steel base material, unless otherwise noted.

²For steel-to-steel connections designed in accordance with Section 4.1.4, the tabulated allowable load may be increased by a factor of 1.25, and the design strength may be taken as the tabulated allowable load multiplied by a factor of 2.0.

³Fastener penetration must be a minimum of 0.27 inch.

⁴Fastener penetration must be a minimum of 0.47 inch.

⁵Fastener penetration must be a minimum of 0.44 inch.

⁶Fastener penetration must be a minimum of 0.33 inch.

From left to right: T3034B/T4034B, T3100/T4100 and T3034S/T4034S.

REPORT HOLDER:

ITW RAMSET

EVALUATION SUBJECT:

RAMSET T3/T4 POWER DRIVEN FASTENERS

1.0 REPORT PURPOSE AND SCOPE

Purpose:

The purpose of this evaluation report supplement is to indicate that Ramset T3/T4 Power Driven Fasteners, described in ICC-ES evaluation report [ESR-1955](#), have also been evaluated for compliance with the codes noted below as adopted by the Los Angeles Department of Building and Safety (LADBS).

Applicable code editions:

- 2026 *City of Los Angeles Building Code* ([LABC](#))
- 2026 *City of Los Angeles Residential Code* ([LARC](#))

2.0 CONCLUSIONS

The Ramset T3/T4 Power Driven Fasteners, described in Sections 2.0 through 7.0 of the evaluation report [ESR-1955](#), comply with the LABC Chapters 19, 21 and 22 and the LARC, and are subject to the conditions of use described in this supplement.

3.0 CONDITIONS OF USE

The Ramset T3/T4 Power Driven Fasteners described in this evaluation report supplement must comply with all of the following conditions:

- All applicable sections in the evaluation report [ESR-1955](#).
- The design, installation, conditions of use and identification of the Ramset T3/T4 Power Driven Fasteners are in accordance with the 2024 *International Building Code*® (IBC) and 2024 *International Residential Code*® (IRC) provisions, as applicable, noted in the evaluation report [ESR-1955](#).
- The design and inspection are in accordance with additional requirements of LABC Chapters 16 and 17, as applicable.
- For seismic applications, the Ramset T3/T4 Power Driven Fasteners must comply with Section 4.1.6 of the evaluation report ESR-1955.
- Under the LARC, an engineered design in accordance with LARC Section R301.1.3 must be submitted.
- The allowable load values listed in the evaluation report and tables are for the connection of the fasteners to normalweight concrete, lightweight concrete, lightweight concrete over metal decks, concrete masonry and steel. The connection between the fasteners and the connected members must be checked for capacity (which may govern).

This supplement expires concurrently with the evaluation report, reissued August 2026 and revised September 2026.

RAMSET T3/T4 POWER DRIVEN FASTENERS

1.0 REPORT PURPOSE AND SCOPE

Purpose:

The purpose of this evaluation report supplement is to indicate that Ramset T3/T4 Power Driven Fasteners, described in ICC-ES evaluation report [ESR-1955](#), have also been evaluated for compliance with the codes noted below.

Applicable code editions:

- 2025 California Building Code (CBC)

For evaluation of applicable chapters adopted by the [California Office of Statewide Health Planning and Development \(OSHPD\) AKA: California Department of Health Care Access and Information \(HCAI\) and the Division of State Architects \(DSA\)](#), see Sections 2.1.1 and 2.1.2 below.

- 2025 California Residential Code (CRC)

2.0 CONCLUSIONS

2.1 CBC:

The Ramset T3/T4 Power Driven Fasteners, described in Sections 2.0 through 7.0 of the evaluation report [ESR-1955](#), comply with CBC Chapters 19, 21 and 22, provided the design and installation are in accordance with the 2024 *International Building Code*® (IBC) provisions, noted in the evaluation report and the additional requirements of CBC Chapters 16, 17, 19, 21 and 22, as applicable.

2.1.1 OSHPD:

The Ramset T3/T4 Power Driven Fasteners, described in Sections 2.0 through 7.0 of the evaluation report [ESR-1955](#), comply with CBC Chapters 19, 21 and 22 and its amendments [OSHPD 1R, 2, 3, 5 and 6], and Chapter 19A, 21A and 22A [OSHPD 1 & 4], provided the design and installation are in accordance with the 2024 *International Building Code*® (IBC) provisions noted in the evaluation report and the additional requirements in Sections 2.1.1.1 and 2.1.1.2 of this supplement, as applicable:

2.1.1.1 Verification Test Requirements: The installation verification test loads, frequency, and acceptance criteria shall be in accordance with Section 1901.3.4 [OSHPD 1R, 2 and 5] or 1910A.5 [OSHPD 1 and 4] of the 2025 CBC.

2.1.1.2 Conditions of Use: Power actuated fasteners in seismic shear applications shall be in accordance with Section 1901.3.1 [OSHPD 1R, 2 and 5] or Section 1617A.1.20 [OSHPD 1, 4 and 6].

2.1.2 DSA:

The Ramset T3/T4 Power Driven Fasteners, described in Sections 2.0 through 7.0 of the evaluation report [ESR-1955](#), comply with CBC Chapter 19, 21 and 22 and its amendments [DSA-SS/CC] and Chapter 19A, 21A and 22A [DSA-SS], provided the design and installation are in accordance with the 2024 *International Building Code*® (IBC) provisions noted in the evaluation report and the additional requirements in Sections 2.1.2.1 and 2.1.2.2 of this supplement, as applicable:

2.1.2.1 Verification Test Requirements: The installation verification test loads, frequency, and acceptance criteria shall be in accordance with Section 1909.2.6 [DSA-SS/CC] or 1910A.5 [DSA-SS] of the CBC, as applicable.

2.1.2.2 Conditions of Use: Power actuated fastener in seismic shear application shall be in accordance with Section 1617A.1.20 [DSA-SS].

2.2 CRC:

The Ramset T3/T4 Power Driven Fasteners, described in Sections 2.0 through 7.0 of the evaluation report [ESR-1955](#), comply with the CRC, provided the design and installation are in accordance with the 2024 *International Residential Code*® (IRC) provisions noted in the evaluation report.

This supplement expires concurrently with the evaluation report, reissued August 2026 and revised September 2026.
