Ramset creates an easier way to extend your reach with the T3Cup

The Ramset T3SS tool is already the world's most popular single-shot gas tool for electrical contractors – now the new T3Cup makes it easier to extend your reach!

Glendale Heights, IL – Effective immediately, the new T3Cup replaces both extension poles (Epol6 and Epol8) for the T3SS tool. The T3Cup, working in conjunction with our newly designed extension poles, allows you to reach virtually anywhere with your T3SS tool. For those times you need to work overhead, and keep your feet on the ground, the T3SS system is the best option out there.

ATTACHES TO THE TOOL IN SECONDS

Made of high-impact plastic, the T3Cup installs in seconds. It consists of only two elements: the Cup and the Retaining Bolt, which is tethered with a cable. Attachment instructions:

1. Place the back of the T3SS (black cap first) into the cup. Make sure the T3SS is fully seated.
2. Press and hold the retaining bolt button to disengage the holding nubs and push the retaining bolt through both holes in tabs on both sides the trigger. Release retaining bolt button while making sure the retaining bolt holding nubs engage on the outside of the opposite tab. The retaining will now be able to “pull the trigger” during operation of the tool.

POLE LENGTHS

- V4-3 (3 foot pole)
- V4-6 (6 foot pole)
- V4-8 (8 foot pole)
- V4-EXT (3 foot extension)

You can add any number of 3 foot extensions to go as high as needed.

OPERATION

Poles and extensions all work on the same principle. Simply close the tool by pushing it up against the work surface; then slide the grey trigger sleeve up to activate the tool.

ITW Commercial Construction, a leading provider of gas and powder fastening systems along with screws, anchors, and adhesives for commercial construction, is a business unit of Illinois Tool Works, (NYSE: ITW), a Fortune 150 company.
